Art Unit: 1654

1. Claims 5 and 6 are generic to a plurality of disclosed patentably distinct sequences comprising: SEQ ID NOS:2-8. These sequences are patentably distinct, each from the other, because of their materially different amino acid sequences. Searching all of the claimed sequences would constitute an undue burden on the examiner because different sequence searches would be required for each of the claimed sequences. Applicant is required under 35 U.S.C. 121 to elect a single disclosed sequence, even though this requirement is traversed. Generic claims 1-4 and 7-19 will be examined with the elected sequence.

Should applicant traverse on the ground that the sequences are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the sequences to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

This is not a species election, but a holding that the sequences are patentably distinct, one from the other.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
